

HOLOGRAM DISPLAY

5

ABSTRACT OF THE DISCLOSURE

10 A hologram display has a projector (2), a hologram  
screen (9), and a filter set (25) that is arranged  
between the projector and the hologram screen to absorb  
light with a peak diffraction efficiency in a specific  
wavelength area. The hologram display faithfully  
reproduces original colors and improves productivity.  
15 Also provided is a hologram screen having a hologram  
element (11) for diffracting and scattering a projected  
beam (21) from a projector (2), and a light scattering  
element (12) whose scattering angle is at least five  
degrees. The hologram screen correctly reproduces  
original colors.
